

Exhibits Introduction:

The Cyber Connection II has designed our exhibits as an electronic way to visit great practices in technology integration. Sometimes it can be challenging to schedule classroom visits to see how lessons and units are planned, managed, and developed into products. After visiting collections of lessons plans on-line, we decided we wanted to have our exhibits look like the very best - and the very best design was on the Apple Learning Interchange.

The Exhibits linked below with "posted before rubric" were our initial exhibits when we were learning the hows and whats of the process. Other exhibits will then follow the rubric expectations defined on the Phase III and Phase IV resources page.

During the 2005-2006 school year peer coaching teams are working on exhibits that meet the rubric expectations. Also working on exhibits are other teachers in the collaborative who are working toward meeting the Phase III and Phase IV expectations.
